

FOR OUR FUTURE, SAVE THE BEES !

Since 1995, honeybees and other pollinators are disappearing yearly by thousand billions all over the world. Ultra toxic pesticides are majorly responsible for the bees and other pollinators' decline. These chemical substances are toxic for the environment, dangerous for human health, insufficiently evaluated and often illegally introduced on the market.

This insecticide scandal has demonstrated unacceptable dysfunction in the way pesticides are evaluated - France being the world second biggest user !

Urgently, the agriculture has to get sustainable, more respectful to life, to health and environment.

More than 80% of vegetable species depend on the bees, which provide more than 35% of our food resources ! Bee is a vital link within the food chain and biodiversity.

Which reminds us of Einstein's quote :

"If all the bees were gone, Humans would be gone within four years".

It is an emergency, it is everyone's duty : For our future, save the bees !

For this ecological and economical disaster to end, we are asking for :

- ° The permanent removal of neurotoxic and systemic insecticides (such as CRUISER®, GAUCHO®, REGENT®....) and of all products used in agriculture including so dangerous substances.

- ° The highest rigorousness and the most severe controls in the toxicity evaluation before a pesticide is introduced on the market (research of its lethal and sub lethal effects).

- ° The interdiction to disseminate in the environment GMO/GMC.

- ° The creation of a European comity composed by independent experts including apidologists, charged with the toxicity evaluation of pesticides and GMO/GMC.

- ° The bees to be urgently recognized as irreplaceable role-player in the biodiversity, and also protected by the UNESCO world heritage.

Support our action that concerns all of us, as well as future generation.

Sign and diffuse as widely as possible this petition !
